

On Q Web is a web development company based in Brisbane, Australia focused in the installation, configuration, customisation and training of Content Management Systems (CMS) for websites or intranets. Regular web services, such as website hosting, domain registration, custom made websites or TYPO3 (an open source CMS framework) modules are also provided.

What is a CMS?

A CMS is a user friendly Internet application that separates content from presentation allowing non-technical authors to add, delete or edit the content of their websites anywhere, anytime.

Web Development & Scripting Services

Even though our content management solutions suit most companies, there are still some special cases where your needs might be a bit different to those of everybody else.

If you don't really need a CMS or if you need a custom made TYPO3 module, our specialised programming services can deliver that unique requirement for you.

Database Programming Services

If you need a custom database driven web application we can create it for you. In fact, TYPO3 is database driven.

Translation Services

English to Spanish and Spanish to English translations to help your company reach other markets.

Writing for the Web

Whether your website is trying to inform or persuade (or maybe both) the words you use and the way you use them is absolutely critical. **On Q Web** provides a professional copywriting service for clients who want that extra polish and style created by an expert wordsmith. We can also train you or your staff members in Internet writing.

Edgar Pisani is the managing director of **On Q Web**. He has eight years experience in developing Internet applications and twelve years experience in the IT industry.

From March 2001 to September 2002 he worked for a Brisbane based company as a project leader for PHP based e-marketing Internet applications and also as a systems administrator for Linux and FreeBSD Internet servers.

In October 2003 after finishing a Graduate Certificate in Management at the Queensland University of Technology (QUT) he started **On Q Web** with the goal of *“Building the modular systems people always wanted”*.

Edgar Pisani is also a MCSE product specialist and has a professional degree in Electronics Engineering.
